CSCI 466 Lab 5 – Course Evaluation

Due Wednesday December 13th

This lab is a freebie. You won't actually be analyzing network traffic. All you need to do is fill out the course evaluation.
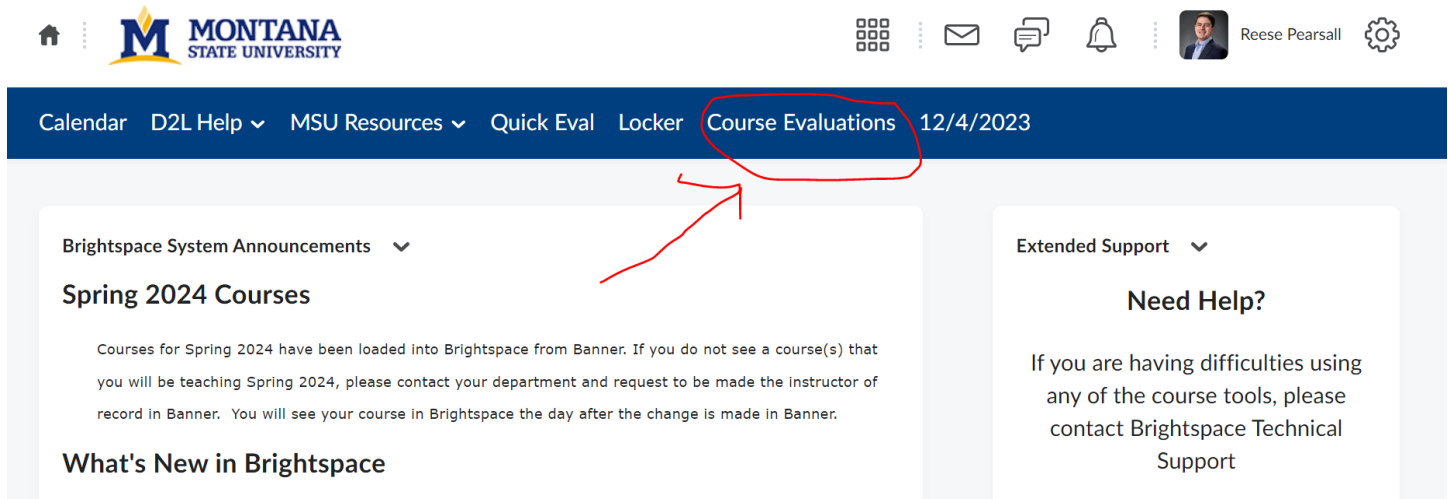

Part I: Double Check your repo + demos

Please double check your GitHub repo and make sure that it is **private**. Even when the class is over, I ask that you keep your repository to be private.

Next, check your video demos (youtube, Panopto, etc) and make sure that they are unlisted so the general public cannot access them.

This is just to make sure that future students can not use solutions from previous semesters to cheat.

Part II: Course Evaluation

Please fill out the course evaluation for CSCI 466. The course evaluation can be found on D2L.

Your (anonymous) feedback and honesty is greatly appreciated. Your feedback will help make me a better instructor and help make CSCI 466 better for future students (if I have to teach this class again...).

I really do care about your feedback, and I do take it very seriously :)

What to submit:

Once you submitted the course evaluation, take a screenshot that shows that you have completed the course evaluation, and submit it to D2L.
